Studies in Education Policy are published periodically throughout the year by The Fraser Institute, Vancouver, British Columbia, Canada.

### **The Fraser Institute**

Our vision is a free and prosperous world where individuals benefit from greater choice, competitive markets, and personal responsibility. Our mission is to measure, study, and communicate the impact of competitive markets and government interventions on the welfare of individuals.

Founded in 1974, we are an independent research and educational organization with offices in Vancouver, Calgary, and Toronto, and international partners in over 70 countries. Our work is financed by tax-deductible contributions from thousands of individuals, organizations, and foundations. In order to protect its independence, the Institute does not accept grants from government or contracts for research.

To order additional copies of Studies in Education Policy, any of our other publications, or a catalogue of the Institute's publications, please contact the publications coordinator via e-mail: [sales@fraserinstitute.ca](mailto:sales@fraserinstitute.ca); via telephone: 604.688.0221, ext. 580 or, toll-free, 1.800.665.3558, ext. 580; via fax: 604.688.8539.

For media enquiries, please contact our Communications department via telephone: 604.714.4582; via e-mail: [communications@fraserinstitute.ca](mailto:communications@fraserinstitute.ca)

# Introduction

The *Report Card on Secondary Schools in British Columbia and Yukon* collects a variety of relevant, objective indicators of school performance into one easily accessible, public document so that all interested parties—parents, school administrators, teachers, students, and taxpayers—can analyze and compare the performance of individual schools. Parents use the *Report Card*'s indicator values, ratings, and rankings to compare schools when they choose an education provider for their children. Parents and school administrators use the results to identify areas of academic performance in which improvement can be made.

## **The Report Card helps parents choose**

Where parents can choose among several schools for their children, the *Report Card* provides a valuable tool for making a decision. Because it makes comparisons easy, the *Report Card* alerts parents to those nearby schools that appear to have more effective academic programs. Parents can also determine whether schools of interest are improving over time. By first studying the *Report Card*, parents will be better prepared to ask relevant questions when they interview the principal and teachers at the schools under consideration.

Of course, the choice of a school should not be made solely on the basis of any one source of information. Families choosing a school for their students should seek to confirm the *Report Card*'s findings by visiting the school and interviewing teachers and school administrators. Parents who already have a child enrolled at the school can provide another point of view. Useful information may also be found on the web sites of the ministry of education, local school

boards, and individual schools. In addition, a sound academic program should be complemented by effective programs in areas of school activity not measured by the *Report Card*. Nevertheless, the *Report Card* provides a detailed picture of each school that is not easily available elsewhere.

## **The Report Card facilitates school improvement**

Certainly, the act of publicly rating and ranking schools attracts attention; attention can provide motivation. Schools that perform well or show consistent improvement are applauded. Poorly performing schools generate concern, as do those whose performance is deteriorating. This inevitable attention provides an incentive for all those connected with a school to focus on student results.

However, the *Report Card* offers more than motivation; it also offers opportunity. The *Report Card* includes a variety of indicators, each of which reports results for an aspect of school performance that might be improved. School administrators who are dedicated to improvement accept the *Report Card* as another source of opportunities for improvement.

## **Some schools do better than others**

To improve a school, one must believe that improvement is achievable. This *Report Card* provides evidence about what can be accomplished. It demonstrates clearly that, even when we take into account factors such as the students' family backgrounds, which some believe dictate the degree of academic success that students will have in school, some schools do better than others. This finding confirms the results of research carried out in

other countries.<sup>1</sup> Indeed, it will come as no great surprise to experienced parents and educators that the data consistently suggest that what goes on in the schools makes a difference to academic results and that some schools make more of a difference than others.

### *Comparisons are at the heart of the improvement process*

Comparative and historical data enable parents and school administrators to gauge their school's effectiveness more accurately. By comparing a school's latest results with those of earlier years, they can see if the school is improving. By comparing a school's results with those of neighbouring schools and of schools with similar school and student characteristics, they can identify more successful schools and learn from them. Reference to overall provincial results places an individual school's level of achievement in a broader context.

There is great benefit in identifying schools that are particularly effective. By studying the techniques used in schools where students are successful, less effective schools may find ways to improve. This advantage is not lost on the United Kingdom's Department of Education and Skills. Its "Leading Edge" program<sup>2</sup> helps educators connect with others who have expertise in particular areas of instruction and school administration.

Comparisons are at the heart of improvement: making comparisons among schools is made simpler and more meaningful by the *Report Card's* indicators, ratings, and rankings.

## What is new in this edition?

### *Grade-10 provincial examination results included*

For the first time in this edition, the results of grade-10 provincial examinations in language arts, mathematics, and science contribute to the calculation of the *Report Card's Overall rating out of 10*. A new indicator has been created (in the tables *Average exam mark gr 10*) that reports the combined average result on the grade-10 provincial tests written by the students at the school. By providing evidence

of school performance at a different grade level, the addition of this new indicator makes the *Report Card* a more complete assessment of how each school is doing academically.

### *The Sports participation rate has been removed*

In the last two editions of the *Report Card*, the *Sports participation rate* provided parents and educators with a measure of the extent to which each school encouraged and assisted its students to adopt and maintain a healthy and active lifestyle. Comments about this indicator from the report card's readers were generally positive and plans had been put into place to refine it by including even more sports participation data. Regrettably, the Board of Directors of British Columbia School Sports Association decided that these data would no longer be shared with us. For this reason, this valuable indicator of a non-academic aspect of school performance is no longer included in the *Report Card*.

## You can contribute to the *Report Card's* development

The *Report Card* program benefits from the input of interested parties. We welcome your suggestions, comments, and criticisms. Please call Peter Cowley, Director of School Performance Studies at 604.714.4556.

## Notes

- 1 See, for instance, Michael Rutter et al., *Fifteen Thousand Hours: Secondary Schools and Their Effects on Children* (Cambridge, MA: Harvard University Press, 1979); Peter Mortimore et al. and *School Matters: The Junior Years* (Wells, Somerset: Open Books, 1988).
- 2 See the website of *Leading Edge*, <<http://www.standards.dfes.gov.uk/leadingedge/>>.

# Key academic indicators of school performance

The foundation of the *Report Card* is an overall rating of each school's academic performance. Building on data about student results provided by the Ministry of Education,<sup>1</sup> we rate each school on a scale from zero to 10. We base our overall rating of each school's academic performance on eight indicators:

- (1) average grade-10 and grade-12 provincial examination marks;
- (2) percentage of grade-10 and grade-12 provincial examinations failed;
- (3) difference between the school mark and examination mark in grade-12 provincially examinable courses;
- (4) difference between male and female students in the value of indicator (3) for English 12 only;
- (5) difference between male and female students in the value of indicator (3) for Mathematics 12 only;
- (6) grade-12 provincially examinable courses taken per student;
- (7) graduation rate;
- (8) delayed advancement rate.

We have selected this set of indicators because they provide systematic insight into a school's performance. Because they are based on annually generated data, we can assess not only each school's performance in a year but also its improvement or deterioration over time.

## Three indicators of effective teaching

### 1 *Average provincial examination marks*

This indicator (in the tables *Average exam mark*) is the average percentage achieved by a school's students on the uniform, grade-10 and grade-12 final examinations in all of the provincially examinable courses.<sup>2</sup> For each school, the indicator is the average of the mean scores achieved by the school's students in each of the provincial examinations at all sittings during the year, weighted by the relative number of students who wrote the examination.

Examinations are designed to achieve a distribution of results reflecting the differences in students' mastery of the course work. Differences among students in interests, abilities, motivation, and work-habits will inevitably have some impact upon the final results. There are, however, recognizable differences from school to school within a district in the average results on the provincial examinations. There is also variation within schools in the results obtained in different subject areas. Such differences in outcomes cannot be wholly explained by the individual and family characteristics of the school's students. It seems reasonable, therefore, to include the average examination mark for each school as one indicator of effective teaching.

### 2 *Percentage of provincial examinations failed*

For each school, this indicator (in the tables *Percentage of exams failed*) provides the rate of failure (as a percentage) in the grade-10 and grade-12 provincial examinations. It was derived by dividing the sum, for each school, of all provincial examinations writ-

ten where a failing grade was awarded by the total number of such examinations written by the students of that school.

In part, effective teaching can be measured by the ability of the students to pass any uniform examination that is a requirement for successful completion of a course. Schools have the responsibility of preparing their students to pass these final examinations.

### 3 *Difference between school mark and examination mark*

For each school, this indicator (in the tables *School vs exam mark difference*) gives the average of the absolute value of the difference between the average mark obtained on the grade-12 provincial examinations and the average “school” mark—the assessment of each student’s learning that is made by the school—for all the grade-12 provincially examinable courses.<sup>3</sup>

Effective teaching includes regular testing so that students may be aware of their progress. For such assessment to be useful, it must accurately reflect the student’s understanding of the course. As a systematic policy, inflation of school-awarded grades will be counterproductive. Students who believe they are already successful when they are not will be less likely to invest the extra effort needed to master the course material. In the end, they will be poorer for not having achieved the level of understanding that they could have gained through additional study. On the other hand, the systematic deflation of grades can work to the detriment of students in those situations where post-secondary admissions and scholarship awards are, in part, based on school assessments. Students may also lose interest in a subject when their actual understanding of the material is disparaged by inadequate recognition.

The effectiveness of school-based assessments can be determined by a comparison to external assessments of the students. In each provincially examinable course, the Ministry of Education, the same authority that designed the course, administers a uniform examination. This examination will test the students’ knowledge of the material contained in the course. If the marks assigned by the school are a reasonably

accurate reflection of students’ understanding, they should be roughly the same as the mark gained on the provincial examination. Thus, if a school has accurately assessed a student as consistently working at a C+ level, the student’s examination result will be at a similar level. If, however, a school is consistently granting marks substantially higher or lower than those achieved by its students on the final examinations, then the school is not providing an accurate indicator of the extent to which knowledge of the course material is being acquired.

## **An indicator of consistency in teaching and assessment**

### *The Gender gap indicators*

Research<sup>4</sup> has shown systematic sex-based differences in academic results in British Columbia’s secondary schools. These differences are particularly apparent where the local school rather than the Ministry of Education makes assessments. However, the same research found that “there appears to be no compelling evidence that girls and boys should, given effective teaching and counselling, experience differential rates of success.”<sup>5</sup> Further, “[t]he differences described by each indicator vary from school to school over a considerable range of values.”<sup>6</sup>

The *Gender gap* indicators measure the difference, if any, in the average Principles of Mathematics 12 and English 12 school marks for boys and girls when their respective average examination marks in the same courses are taken into account. For each course, the indicator value is determined according to the formula:

$$\begin{aligned} & (\text{Female school mark} - \text{Female exam mark}) \\ & - (\text{Male school mark} - \text{Male exam mark}) \end{aligned}$$

The indicator reports the size of the difference and the more successful sex.

The *Gender gap* indicators are affected by at least two factors. If the components of the curriculum tested at the school level are different from those tested on the provincial examination, a large gender gap indicates

that the favoured sex is, on average, more successful in acquiring the skills and knowledge embodied in those aspects of the curriculum tested at the school level. If the components of the curriculum tested at the school level are the same as those tested on the provincial examination, then a large gender gap indicates that the school-based assessment may be biased in favour of one sex or may include factors in the assessment other than an understanding of the curriculum. In either case, schools experiencing large gender gaps should investigate classroom practice to determine why one sex receives better grades than the other.

### Three indicators of practical, well-informed counselling

While they are attending secondary school, students must make a number of decisions of considerable significance about their education. Once they have reached the age of 16, for instance, they are at liberty to continue or end their educational program.<sup>7</sup> Before grade 10, they are required to choose between different streams in Mathematics. They will annually decide whether to begin or continue the study of a second language.

Will these young people make good decisions? It is unrealistic to presume that they can do so without advice. What practical, well-informed counselling can they call upon? While parents, in the main, are willing to help, many lack the information they need to be able to provide good advice. It falls, therefore, to the schools to shoulder some responsibility for advising students and their parents about educational choices.

The final three indicators used in the calculation of the *Overall rating out of 10* assess the counsel given by the schools by measuring the quality of the decisions taken by the students about their education. Of course, wise students will seek guidance not only from the counsellors designated by the schools but also from teachers and administrators, parents, and other relatives. Where students have strong support from family and community, the school's responsibility for counselling may be lighter; where students do

not have such strong support, the school's role may be more challenging. These indicators measure the school's success in using the tools at its disposal to help students make good decisions about their education.

There are two very important decisions that senior students must make. First, they must decide whether or not to remain in school, do the work, and graduate with their class. Second, they must decide whether or not to take a number of academically challenging provincially examinable courses. Effective counselling will encourage students to make appropriate choices.

#### 1 *Delayed advancement rate*

This indicator measures the extent to which schools keep their students in school and progressing in a timely manner toward completion of their diploma program. It uses data that report the educational status of students one year after they have enrolled in a given grade at a school in British Columbia. For example, we can determine from these data how many of a school's grade-10 students re-enroll in the following year in grade 11; are enrolled in grade 10 for a second time; or fail to re-enroll. With these raw data, following a technique that we introduced to Canada in the *Report Card on Quebec's Secondary Schools, 2001 Edition*,<sup>8</sup> we calculate a statistic that will answer the question, "Based on this single year's school results, what is the likelihood that a student entering grade 10 at the school will graduate in the normal three-year period?"

The indicator is calculated as follows. For each school, for each of grades 10, 11, and 12, a rate of successful transition is determined by first summing the number of students who either receive a diploma in the current school year or re-enroll in a higher grade in the following year and then dividing that sum by the number of students enrolled in the grade in the current year. Then, for each grade, a dropout rate is determined by subtracting the rate of successful transition from 1. Each of the three dropout rates is then reduced by the average grade-8 dropout rate at the school during the last three years in order to produce a net dropout rate for each grade. We have adopted the grade-8 drop-out rate as an estimate of

the “involuntary” drop-out rate caused by events such as emigration or death that lead to the disappearance of students from the school system.

The *Delayed advancement rate* indicator can now be calculated. The complement of the net dropout rates ( $1 - \text{net drop-out rate}$ ) for grades 10 through 12 is determined and their product is calculated. This three-year composite successful transition rate is then subtracted from 1 to produce the *Delayed advancement rate* indicator that appears in the detailed tables.

Where a school does not enroll grade-8 students, the net dropout rate is calculated using the three-year average grade-8 dropout rate for the school district in which the school is located. Where a school does not enroll grade-10 or grade-11 students, no *Delayed advancement rate* can be calculated. The relative weighting in the calculation of the *Overall rating out of 10* that is given to this and the other indicators is explained in the Appendix.

It is appropriate to include this indicator in the *Report Card* as it appears that the existing *Graduation rate* indicator will soon be of little use in differentiating among schools. The average value for all schools on this indicator has risen steadily from 84.5% in the 1992/1993 school year to 95.2% in 2004/2005. As a matter of simple mechanics, an indicator that is unvarying is not a useful one for determining differences in effectiveness among schools.

## 2 Graduation rate

This indicator, related to the *Delayed advancement rate*, compares the number of eligible graduates enrolled in the school on September 30 with the number of students who actually graduate by the end of the same school year. Only those enrollees who are capable of graduating with their class within the current school year are included in the count of eligible graduates.

Graduation from secondary school retains considerable value since it increases options for post-secondary education. Further, graduates from secondary school who decide to enter the work force immediately will, on average, find more job opportunities than those who have not graduated. By completing the 11 years of schooling in preparation for the final secondary school

year, students have already demonstrated a reasonable ability to handle the basic courses offered by the school. Moreover, for the majority of students, the minimum requirements for graduation are not onerous. The chance that students will not graduate solely because they are unable to meet the intellectual demands of the curriculum is, therefore, relatively small.

Nevertheless, the graduation rate varies quite widely from school to school throughout the province. While there are factors not related to education—emigration from the province, sickness, death, and the like—that can affect the data, there is no reason to expect these factors to influence particular schools systematically. Accordingly, we take variations in the graduation rate to be an indicator of the extent to which students are being well coached in their educational choices.

## 3 Provincially examinable courses taken per student

This indicator (in the tables *Exams taken per student*) measures the average number of provincially examinable courses completed by the students at a school. It is derived by summing the participation rates for all the provincially examinable courses taken at that school. (The *participation rate* is the ratio, for a school, between the number of students writing the provincial examination in a particular subject and the number of students enrolled in grade 12.)

In their senior years, students have freedom to choose from a considerable variety of courses. Their choices will have an impact upon their literacy, numeracy, and analytical skills upon graduation. Their choices also affect the immediate post-secondary options open to them.

Provincially examinable courses offer study at the senior level in a variety of core disciplines: English, mathematics, the sciences, the humanities, and other languages. The Ministry has included courses in each discipline that reflect the post-secondary ambitions of different groups of students and, far from being courses only for a university-bound elite, these courses teach skills and knowledge that will benefit students no matter what they plan to do after graduation. Further, it is the

marks obtained in these courses that are commonly used by post-secondary institutions—institutes of technology and community colleges as well as universities—to assess the applicant’s readiness for further study and for admission to programs with limited enrolment. Thus, for most students a decision to take advantage of these courses is a good one and a school that is successful in encouraging students to take these courses shows that it offers practical, well-informed counselling.

## In general, how is the school doing academically? The Overall rating out of 10

While each of the indicators is important, it is almost always the case that a school does better on some indicators than on others. So, just as a teacher must make a decision about a student’s overall performance, we need an overall indicator of school performance (in the tables *Overall rating out of 10*). Just as teachers combine test scores, homework, and class participation to rate a student, we have combined all the indicators to produce an overall school rating. The overall rating of school performance answers the question, “In general, how is the school doing, academically?”

To derive this rating, the results for each of the indicators for each school year were first standardized. Standardization is a statistical procedure whereby sets of raw data with different characteristics are converted into sets of values with “standard” statistical properties. Standardized values can readily be combined and compared.

The standardized data were then combined as required to produce nine standardized scores—one for each indicator—for each school, for each year. The standardized scores were weighted and combined to produce an overall standardized score. Finally, this score was converted into an overall rating out of 10. It is from this *Overall rating out of 10* that the school’s provincial rank is determined. For schools teaching only one sex, there are, of course, no results for the *Gender gap* indicators. In these cases, the *Overall rating* is derived using the remaining seven indicators.

(See the Appendix for an explanation of the calculation of the *Overall rating out of 10*.)

## Notes

- 1 The data from which these indicators are derived is provided by British Columbia’s Ministry of Education.
- 2 In 2005/2006 school year, provincial examinations were written in the following grade 10 and grade 12 subjects:  
Applications of Mathematics 10;  
Applications of Mathematics 12; BC First Nations Studies 12; Biology 12; Chemistry 12; Civic Studies 11; Communications 12; English 10; English 12; English Literature 12; Essentials of Mathematics 10; Francais Langue Premiere 10; Francais Langue Premiere 12; Francais Langue Seconde-Immersion 12; French 12; Geography 12; Geology 12; German 12; History 12; Japanese 12; Mandarin Chinese 12; Physics 12; Principles of Mathematics 10; Principles of Mathematics 12; Punjabi 12; Science 10; Social Studies 11; Spanish 12; and Technical Professional Communications 12.
- 3 A student’s final mark for a grade-12 provincially examinable course is derived from both the mark received on the course’s uniform provincial examination and a mark provided by the school. The final mark is the weighted average of the examination mark that accounts for 40% and the school mark that accounts for the remaining 60%.

# Other indicators of school performance

Since the inception of the *Report Card*, we have added other indicators that, while they are not used to derive the *Overall rating out of 10*, add more information about a school's effectiveness.

## The Socioeconomic indicator

When they design their lesson plans and deliver the curriculum, educators can and should take into account the abilities, interests, and backgrounds of their students. By doing so, educators can overcome disadvantages that their students may have. The socioeconomic indicator enables us to identify schools that are successful despite adverse conditions faced by their students at home. Similarly, it identifies schools where students with a relatively positive home situation appear not to be reaching their presumed potential.

The socioeconomic indicator was derived as follows. First, using enrolment data from the Ministry of Education sorted by Dissemination Area (a census geography) and 2001 census data provided by Statistics Canada, we established a profile of the student body's home characteristics for each of the schools in the *Report Card*. We then used multiple regression analysis to determine which of the home characteristics were associated with variations in school performance as measured by the *Overall rating out of 10*. Taking into account all of the socioeconomic variables simultaneously, we identified one characteristic that was significantly associated with the *Overall rating*: the average number of years of education of the most educated parent in a two-parent family (or of the lone parent in a single-parent family). When a school had more highly educated

parents, the *Overall rating* at the school was likely to be higher.<sup>1</sup>

As a measure of the success with which each school took into account the socioeconomic characteristics of the student body, we used the formula derived from the regression analysis to predict the *Overall rating* for each school. We then reported the difference (in the tables *Actual rating vs predicted rating based on parents' avg. ed.*) between the actual *Overall rating* and this predicted value in each school's results table.

For example, during the 2005/2006 school year, Pinetree Secondary, a public school in Coquitlam, achieved an *Overall rating* of 7.8 and yet, when the family characteristics of the student body are taken into account, the school was expected to achieve a rating of only about 6.6. The difference of 1.2 is reported in the tables. On the other hand, the actual *Overall rating* of Garibaldi Secondary in Maple Ridge-Pitt Meadows was 4.7, although its predicted rating was 6.4. The reported difference for Garibaldi is -1.7. This measurement suggests that Pinetree is more successful than Garibaldi in enabling all of its students to reach their potential.

This measure of the effect of the socioeconomic background of a school's student body is presented with two important notes of caution. First, only about 30% of the variation among BC schools in the overall rating is associated with family characteristics like the level of parents' education. Clearly, many other factors—including good teaching, counselling, and school administration—contribute to the effectiveness of schools. Second, the statistical measures used describe past relationships between a socioeconomic characteristic and a measure of school effectiveness. These relationships may not remain static. The more effectively the school enables all of its students to suc-

ceed, the weaker will be the relationship between the home characteristics of its students and their academic success. Thus, this socioeconomic indicator should not be used as an excuse or rationale for poor school performance. The effective school will produce good results, regardless of the family background of its students.

### **Is the school improving academically? The *Trends* indicator**

For all the indicators, the *Report Card* provides a number of years of data. Unlike a simple snapshot of one year's results, this historical record provides evidence of change (or lack of change) over time. However, it can sometimes be difficult to determine whether a school's performance is improving or deteriorating simply by scanning several years of data.

To detect trends in the performance indicators more easily, we developed the *Trends* indicator. It uses statistical analysis to identify those dimensions of school performance in which there has likely been real change rather than a fluctuation in results caused by random occurrences. Since standardizing makes historical data more comparable, the standardized scores rather than raw data are used to determine the trends. Because calculation of trends is uncertain when only a small number of

data points are available, a trend is indicated only in those circumstances where at least five years of data are available and where it is determined to be statistically significant. In this context, "statistically significant" means that, nine times out of 10, the trend that is noted is real; that is, it would not have happened just by chance.

### **The *Student characteristics* indicators**

For each public school, the *Report Card* notes the percentage of its students who are enrolled in ESL programs, in French Immersion programs, or who have identified special needs. As was noted in the introduction, it is sometimes useful to compare a school's results to those of similar schools. These three indicators can be used to identify schools with similar student-body characteristics.

### **Notes**

# Detailed school reports

## How to read the tables

Use the sample table and the explanation of each line below to help you interpret the detailed results for individual schools. Families choosing a school for their students should seek to confirm the *Report Card's* findings by visiting the school and interviewing teachers, school administrators, and other parents. And, of course, a sound academic program should be complemented by effective programs in areas of school activity not measured by the *Report Card*.

More information regarding schools may be found

on the Ministry of Education's web site at <<http://www.bced.gov.bc.ca/reporting/select/>> and on the web sites of local school districts and individual schools.

**IMPORTANT:** In order to get the most from the *Report Card*, readers should consult the complete table of results for each school of interest. By considering several years of results—rather than just a school's rank in the most recent year—readers can get a better idea of how the school is likely to perform in the future.

DISTRICT NAME									
School name [Affiliation]		Gr 12 Enrollment: 205							
B	ESL (%): 6.4	Special needs (%): 5.5				French Imm (%): 0.0			
	Actual rating vs predicted based					2005-06 Last 5 Years

### A—Gr 12 Enrollment

The grade-12 enrollment on September 30, 2005. Indicator results for small schools tend to be more variable than do those for larger schools and caution should be used in interpreting the results for smaller schools.

### B—ESL (%); Special needs (%); French Imm (%)

These statistics report the percentage of students for whom English is a second-language; the percentage of

students with special needs; and the percentage of students registered in French Immersion programs at the school. When you want to compare academic results, these statistics can be used to find other schools where the student body has similar characteristics.

### C (left)—Actual rating vs predicted based on parents' average education

This statistic compares the school's actual *Overall rating out of 10* with the rating that is predicted by the average number of years of education of the most

educated parent in each student's family. A positive difference suggests that the school is effective in enabling its students to succeed regardless of their family's characteristics.

### *C (right)—Academic ranking*

The school's overall academic rank in the province for 2005/2006 and for the most recent five years. These rankings show how the school has done academically compared to the other schools in the province. A high ranking over five years indicates consistently strong results at the school.

### *D—Average exam mark gr 10*

The average mark (%) achieved by the school's students on all the grade-10 provincial examinations.

### *E—Average exam mark gr 12*

The average mark (%) achieved by the school's students on all the grade-12 provincial examinations.

### *F—Percentage of exams failed*

The percentage of all the grade-10 and grade-12 provincial examinations written by students at the school that received a failing grade.

### *G—School vs exam mark difference*

The difference (in percentage points) between the grade-12 marks received at the school and the grade-12 provincial examination marks. A large difference usually indicates that the school has been "inflating" grades.

### *H—English 12 gender gap*

### *I—Principles of Math 12 gender gap*

The difference (in percentage points) between boys and girls in the extent to which their school marks in English 12 and Principles of Math 12 are different from their examination marks. Where the difference favours girls, the value is preceded by an **F**; where the difference favours boys, the value is preceded by an **M**. An **E** means that there is no difference between the girls and the boys on this measure. Small differences indicate that the school is doing a good job for all its students.

### *J—Exams taken per student*

The number of grade-12 provincial examinations taken in each school divided by the grade-12 enrollment. Taking more of these provincially examinable courses may provide students with greater post-secondary opportunities.

### *K—Graduation rate*

The percentage of eligible graduates enrolled on September 30 who actually graduate in the same school year. Higher rates of graduation indicate that the school is doing a good job of keeping students on track and focused on their work during their final year.

### *L—Delayed advancement rate*

The estimated percentage of the schools grade-10 students who will not complete grade 12 within three years. Low *Delayed advancement rates* indicate that the school's students are likely to complete the last three grades of secondary school in the normal time.

### *M—Overall rating out of 10*

The *Overall rating out of 10* takes into account the school's performance on all of these indicators and answers the question, "In general, how is the school doing in academics?"

### *N—Trends*

An upward pointing arrow at the end of an indicator row means that the school is probably improving on that indicator; a downward pointing arrow means that the school is probably getting worse. A dash (—) indicates that there is no significant change; "n/a" indicates that there was insufficient data available with which to calculate a trend. The measurement of trends is based on the most recent five years of data.

## **Other notes**

### *Note 1*

The tables showing the detailed school results are organized by four geographic regions of the province as follows: (1) Lower Mainland, (2) Vancouver

Island and the Coast, (3) Fraser Valley and Southern British Columbia, and (4) Interior, Northern British Columbia, and Yukon. Within each geographic region, school districts are grouped alphabetically. Finally, within each school district, both public and independent (private) schools are listed alphabetically. Where there are ties, the schools are listed in order of their provincial ranking for the last five years.

### Note 2

Not all the province's secondary schools are included in the tables or the ranking. Of the 571 schools for which any provincial examination results were reported, this *Report Card* looked at 291. Excluded are schools at which fewer than 15 students were enrolled in grade 12 and schools that did not generate a sufficiently large set of student data to enable the calculation of an *Overall rating out of 10*. Also excluded from the ratings and rankings are: centres for adult education and continuing education; schools that cater largely to non-resident foreign students; and certain alternative schools that do not offer a full program of courses.

**The exclusion of a school from the *Report Card* should in no way be construed as a judgement of the school's effectiveness.**

### Note 3

Where there were insufficient data available with which to calculate an indicator or where a school was not in operation during a specific year, "n/a" appears in the tables.

### Note 4

The complete *Report Card on Secondary Schools in British Columbia and Yukon* may be downloaded from the Fraser Institute's web site at <<http://www.fraserinstitute.ca/reportcards/index.asp?snav=rc>>.

### Note 5

Due to continuing improvements in methodology, some historical values for indicators and overall ratings are different from those previously reported.

### Note 6

You can compare a school's results with the all-schools results shown below.

### Note 7

If you have questions about the *Report Card*, contact Peter Cowley at the Fraser Institute at 604.714.4556.

#### Average values for all schools 2005/2006

Average ESL (%): 4.8      Average Special Needs (%): 10.3      Average French Immersion (%): 3.1  
Average Parents' Education: 14.5

Academic Performance	2000	2001	2002	2003	2004	2005	2006	Trend
Average exam mark gr 12	68.1	69.0	69.3	69.7	69.6	70.1	70.1	▲
Average exam mark gr 10	n/a	n/a	n/a	n/a	n/a	n/a	66.2	n/a
Percentage of exams failed	12.1	11.4	9.9	10.1	9.8	9.2	11.6	—
School vs exam mark difference	6.4	5.8	5.5	6.2	6.4	6.0	5.9	—
English 12 gender gap*	2.5	3.0	2.9	2.9	2.6	2.5	2.6	▲
Math 12 gender gap*	3.8	3.0	3.0	2.7	2.4	2.2	2.4	▲
Exams taken per student	2.8	2.9	2.9	2.9	2.8	2.9	2.8	—
Graduation rate	93.0	94.0	94.3	95.0	95.1	95.2	94.7	—
Delayed advancement rate	25.6	23.1	22.2	21.5	22.1	22.3	22.0	—
<b>Overall rating out of 10</b>	<b>6.2</b>	<b>6.2</b>	<b>6.2</b>	<b>6.2</b>	<b>6.2</b>	<b>6.2</b>	<b>6.2</b>	—

\* These results reflect the average size of the gender gaps. In 2005-2006, the English gender gap favoured females at 67.2% of schools, males at 32.1% of schools, and was even at 0.7% of schools. The Math gender gap favoured females at 64.0% of schools, males at 34.3% of schools, and was even at 1.7% schools."

# Ranking the schools

## Important notes to the rankings

In this table, schools are ranked (on the left hand side of the page) in descending order (from 1 to 289) according to their academic performance as measured by the *Overall rating out of 10* (shown on the right hand side of the table) for the school year 2005/2006. Each school's five-year average ranking and *Overall rating out of 10* are also listed. The higher the overall rating (out of 10), the higher the rank awarded to the school. Where schools tied in the overall rating, they were awarded the same rank. Where less than five years of data was available, "n/a" appears in the table.

Not all the province's secondary schools are included in the tables or the ranking. Excluded are schools at which fewer than 15 regular day students were enrolled in grade 12 and schools that did not

generate a sufficiently large set of student data to enable the calculation of an *Overall rating out of 10*. Also excluded from the ratings and rankings are centres for adult education and continuing education; schools that cater largely to non-resident foreign students; and certain alternative schools that do not offer a full program of courses.

**The exclusion of a school from the *Report Card* should in no way be construed as a judgement of the school's effectiveness.**

**IMPORTANT: In order to get the most from the *Report Card*, readers should consult the complete table of results for each school of interest. By considering several years of results—rather than just a school's rank in the most recent year—readers can get a better idea of how the school is likely to perform in the future.**

# Appendix 1: Calculating the Overall rating out of 10

The *Overall rating out of 10* is intended to answer the question, “In general, how is the school doing, academically?” The following is a simplified description of the procedure used to convert the raw indicator data into the *Overall rating out of 10*.

1 The *School vs exam mark difference* for each course and the English 12 and Mathematics 12 *Gender gap* indicators were calculated using the raw data.

2 Course by course, all the results were then converted into standardized or “Z” scores by solving the equation

$$Z = (X - \mu) / \sigma$$

where  $X$  is the individual school’s result,  $\mu$  is the mean of the all-schools distribution of results, and  $\sigma$  is the standard deviation of the same all-schools distribution.

3 With the exception of the *Gender gap* indicators (these use the results from a single course), the course-by-course standardized data were then aggregated to produce weighted average indicator values. The weighting used was the number of examinations written in each course at the school relative to the total number of examinations written at the school.

4 These weighted average results were then re-standardized.

5 The nine standardized indicator results were then combined to produce a weighted average summary standardized score for the school. The weightings used in this calculation were *Average exam mark gr 12*—15%, *Average exam mark gr 10*—5%, *Percentage of exams failed*—20%, *School vs exam mark difference*—10%, *English 12 gender gap*—5%, *Math 12 gender gap*—5%, *Exams taken per student*—20%, *Graduation rate*—10%, and *Delayed advancement rate*—10%. For schools for which there were no gender-gap results because only boys or girls were enrolled, the *School vs exam mark difference* was weighted at 20%. Where no *Composite dropout rate* could be calculated, the *Graduation rate* was weighted at 20%.

6 This summary standardized score was then standardized.

(Note: In this edition of the *Report Card*, the *Sports participation rate* indicator was not used in the calculation of the *Overall rating*. It will contribute to the *Overall rating* in future editions.)

This standardized score was converted into an overall rating between 0 and 10 as follows:

7 The maximum and minimum standardized scores were set at 2.2 and –3.29 respectively. Scores equal to, or

greater than 2.2 receive the highest overall rating of 10. This cut-off was chosen because it allows more than one school in a given year to be awarded 10 out of 10. Scores of equal to, or less than, -3.29 receive the lowest overall rating of 0. Schools with scores below -3.29 are likely to be outliers—a statistical term used to denote members of a population that appear to have characteristics substantially different from the rest of the population. We chose, therefore, to set the minimum score so as to disregard such extreme differences.

- 8 The resulting standardized scores were converted into *Overall ratings* according to the formula:

$$OR = \mu + (\sigma * \text{StanScore}),$$

where *OR* is the resulting *Overall rating*,  $\mu$  is the average calculated according to the formula:

$$\mu = (OR_{\min} - 10 (Z_{\min} / Z_{\max})) / (1 - (Z_{\min} / Z_{\max}))$$

where  $\sigma$  is the standard deviation calculated according to the formula:

$$\sigma = (10 - \mu) / Z_{\max}$$

and StanScore is the standardized score calculated in (6) above and adjusted as required for minimum and maximum values as noted in (7) above. As noted in (7) above,  $OR_{\min}$  equals zero,  $Z_{\min}$  equals -3.29; and  $Z_{\max}$  equals 2.2.

- 9 Finally, the derived *Overall rating* is rounded to one decimal place to reflect the significant number of places of the decimal in the original raw data.

Note that the *Overall rating out of 10*, based as it is on standardized scores, is a relative rating. That is, in order for a school to show improvement in its overall rating, it must improve more than the average. If it improves, but at a rate less than the average, it will show a decline in its rating.

# About the authors

## Peter Cowley

Peter Cowley is the Director of School Performance Studies at The Fraser Institute. He graduated from the University of British Columbia with a B.Comm. in 1974. Shortly thereafter, he began a long career in marketing and general management in several sectors. During his assignments in general management, process improvement was a special focus and interest. In 1994, Mr Cowley independently wrote and published *The Parent's Guide*, a popular handbook for parents of British Columbia's secondary-school students. *The Parent's Guide* web site replaced the handbook in 1995.

In 1998, Mr Cowley was co-author of The Fraser Institute's *A Secondary Schools Report Card for British Columbia*, the first of the Institute's continuing series of annual reports on school performance. This was followed by *The 1999 Report Card on British Columbia's Secondary Schools*, *The 1999 Report Card on Alberta's High Schools*, and *Boys, Girls, and Grades: Academic Gender Balance in British Columbia's Secondary Schools*. Since then, Mr Cowley has co-authored all of the Institute's annual report cards on Canadian schools. Annual editions now include report cards on secondary schools in British Columbia, Yukon, Alberta, Ontario, and Quebec and on elementary schools in British Columbia, Alberta, and Ontario as well as the annual *Report Card on Aboriginal Education in British Columbia*.

## Stephen T. Easton

Stephen T. Easton in addition to being a Senior Scholar at the Fraser Institute, is a professor of Economics, a member of the School for International Studies, and an Associate member of the School of Criminology at Simon Fraser University. He received his A.B. from Oberlin College and his Ph.D. from the University of Chicago. Recent works published by The Fraser Institute include *Marijuana Growth in British Columbia* (2004), *Privatizing Prisons* (editor, 1998), *The Costs of Crime: Who Pays and How Much? 1998 Update* (with Paul Brantingham, 1998), and *Rating Global Economic Freedom* (editor, 1992). A co-author of *A Secondary Schools Report Card for British Columbia* (1998), *Boys, Girls, and Grades: Academic Gender Balance in British Columbia's Secondary Schools* (1999) and the *Report Card on Aboriginal Education in British Columbia* (2004), he has continued to co-author the *Report Cards* for British Columbia, Alberta, New Brunswick and, most recently, Ontario. Other publications about education include "Do We Have a Problem Yet? Women and Men in Higher Education," in David Laidler (ed.), *Renovating the Ivory Tower: Canadian Universities and the Knowledge Economy* (C.D. Howe Institute, 2002), pp. 60–79; "Plus ça change, plus c'est la même chose" in Stephen B. Lawton, Rodney Reed, and Fons van Wieringen, *Restructuring Public Schooling* (Springer-Verlag, 1997) and *Education in Canada: An Analysis of Elementary, Secondary, and Vocational Schooling* (The Fraser Institute, 1988). His editorials have been carried by the *Vancouver Sun*, the *Globe and Mail*, the *National Post*, the *Ottawa Citizen*, the Stirling chain and many other newspapers around the country.
