For immediate release

TORONTO—The federal government’s plan to impose a $170 per tonne carbon tax in place nationally by 2030 will result in 86,863 fewer jobs in Ontario, finds a new study released today by the Fraser Institute, an independent, non-partisan, Canadian public policy think-tank.

“The federal government has said the higher carbon tax will have ‘almost zero’ impact on the economy, but in fact, a tax of that magnitude will have significant effects on the economy and on Canadian workers across the country, including in Ontario,” said Ross McKitrick, a Fraser Institute senior fellow and author of Estimated Impacts of a $170 Carbon Tax in Canada.

The study also finds that a national $170 per tonne carbon tax will cause a 1.8 per cent drop in Canada’s Gross Domestic Product (GDP), which in 2019 would represent a loss to the economy of about $37.8 billion.

Ontario’s economy is projected to contract by 1.9 per cent.

And even taking the carbon tax rebate into account, the average Canadian worker will still have $1,540 less income every year as a result of the $170 carbon tax.

“Many previous studies, including some from the federal government itself, have shown that a large carbon tax will have major negative impacts on the economic well-being of Canadians,” said Elmira Aliakbari, director of natural resource studies at the Fraser Institute and study co-author.

“Our new study confirms these earlier findings. The government needs to be transparent with Canadians about what the real costs of this policy are likely to be.”
