

Textbooks Reviewed

The authors reviewed these textbooks for their coverage of environmental issues only. The authors did not review the subject matter content of the nonenvironmentally related information in these texts. Criticisms of the environmental content does not imply criticism of the nonenvironmental content of these texts. Canadian textbooks were reviewed by Liv Fredricksen.

The textbooks reviewed for this book were published by many of the top-selling publishing companies in the country. Textbook publishers do not release sales figures on individual textbooks so it is impossible to determine the exact proliferation specific textbooks. By selecting the top publishing firms, we believe that these texts are among the most commonly used texts.

Books for a Well-Stocked Environmental Library

The books in this appendix should be in your child's junior high school or high school library. Some offer a more balanced view of environmental issues; others offer insights that are often ignored in environmental teaching today. Generally written in nontechnical language, they will broaden your children's understanding of environmental issues.
